Subject: Malibu Contamination Case Coverup: TRUTH SHEET and 2 attachments

Dearest Friends,

Tonight's Santa Monica Malibu Unified School Board meeting is being held at the City Hall in Malibu at 6pm. It is so very important that parents and alumni know what is at stake here. Three teachers out of the twelve teachers Malibu Middle School staff were diagnosed with thyroid cancer in the last year. Three recent alumni from Malibu High have been diagnosed with Thyroid Cancer. All concerned parents must insist on the soil being tested something we've asked Superintendent Lyon to do two months ago when this ordeal began. Superintendent Lyon promised me back in early October that she would test the soil and then she promptly organized a Task Force that was lead by the very people who have covered up the situation and made it worse. They went ahead and tested for Radon, which no one but them cared about. For us, it has always been about the soil.

Now the SMMUSD has hired Pillsbury, one of the top law firms in the Country, to represent the Board in this matter. But they still refuse to test the soil. It's been two months now.

I've had three Wiseman children go to Malibu High and have been a parent there for thirteen years. My daughter is getting her Masters at UC Irvine, my son just graduated with honors from UC Berkeley. I have one left and he loves Malibu High. I love Malibu High. And the Wiseman Family all love the teachers and staff.. In all these years I've never had one complaint against the school. I was never active in a leadership roll because I always preferred to be where the teachers needed me but I've always served the school happily.

Please come to tonight's meeting or send an email to the School District insisting they remediate the contaminated soil over the Winter Holiday. After consulting with Hugh Kaufman, cofounder and senior analyst at the EPA and Dr. Paul Rosenfeld, I'm not joking when I say that I would only send my son to the school library if he wore a hazmat suit, and yet, the Board still sees fit to leave it open and OUR children unprotected. These contaminants are not going to poison our children over night, but if they are exposed to them, over and over, every week day, and I worry that without remediating the soil that there will be more children and more teachers who will become sick from long term toxic contamination..

Could you send this "TRUTH SHEET" and 2 attachments to all the folks who got Elaine Rene Weissman's coverup email, yesterday, to any alumni of Malibu High School or parents you know who have children or will have children or care about the children and their teachers at Malibu High School.

I'm still not 100% confident that all the folks who are questioning the SMMUSD folks really know how very deep & crooked this coverup is.

Or that it includes the California State EPA Department of Toxic Substances control (DTSC)--Who are now, according to Elaine, in charge of the Case.

Thank You, Cassandra Wiseman and Hugh Kaufman, Senior Analyst and Co-Founder of the EPA.
